

Please do not allow the NAB to squash the ability of satellite radio companies to provide valuable and informative information. The ability to get local weather and more importantly TRAFFIC reports is extremely valuable, while in Orlando recently I was able to tune in to XM/229 to listen to the weather & traffic report, not knowing the area that well (except for the routes to the Disney parks) helped to very much.

There is no reason why the NAB cannot improve their services rather than attack something they see as a threat. The nature of the American economy mandates that companies compete to stay in business. Let's not stop a technology that works so well, rather let the other companies work on a new method for their current systems or enhance them.

Thank you for protecting our rights as citizens to choose and enforcement of our first amendment rights!

God Bless!

John Cahill
